

Training for utilization of leak detection equipment were held in Ulcinj (Montenegro) from 21 to 23 October 2015. Originally it was planned that the training would be held only for employees of VIK Ulcinj, but how the water supply companies from Herceg Novi, Kotor, Tivat and Bar expressed the interest for participation, with the consent of VIK Ulcinj and these water companies were invited and participated in the training program.

The training was carried out directly on the field in real conditions of functioning of the water supply system, in the DMA which is selected for the comprehensive water loss reduction campaign. This campaign will start next month.

The training program is performed within the Consulting Services for Institutional support to Waterworks in Ulcinj, which is financed by KfW bank and implemented by the German consulting company Sachsen Wasser from Leipzig.

The training was managed by authorized trainer mr. ?evad Koldo, who is also the deputy team leader of the entire stated project.
