Within the project: "Improvement of water resources management in Djakovica and Bijelo Polje" (IPA Cross - Border Cooperation Programme for Montenegro and Kosovo), will be carried out Water Balance analysis in accordance with IWA

methodology using "Bottom - Up" approach. This analyse will be performed on the basis of hydraulic measurement which will be performed during february 2017. and using software CalcuLEAKator 5.0 made for Water Balance analyses and calculations of Performance Indicators in systems which contain up to 60 DMAs.

In addition NRW component in the project VIK Bijelo Polje will obtain GIS software, GPS devices and training for utilisation of the device as well as for the use of GIS software.
